

**Message from the CEO**

Welcome to the first edition of the Parking Insider with myself as the new Chief Executive following Lorraine Duffy's departure at the end of March. Lorraine was a driving force behind the growth and influence of the association and her departure leaves very large shoes to fill. My first month at Parking Australia has certainly been an education for me and I'm particularly impressed in what Parking Australia has achieved in a relatively short space of time. Naturally I am still finding my way around and familiarising myself with the various activities that Parking Australia is involved with...[Read more...](#)

## Call for entries announced

Entries are now open for the 2018 Parking Industry Awards. The Awards are a dedicated event which celebrates the achievements of individuals, teams and organisations in the parking industry. In 2018 the Parking Industry Awards will cover seven categories, including a new category for Young Achievers in parking...[Read more...](#)

## Top trending topics at Intertraffic 2018

Parking Australia Director, Sharon Prior, discusses her key learnings from Intertraffic 2018, including the harvesting and sharing of big data, smart mobility and the need to focus, more than ever, on improving the customer experience through the provision of information. [Read more...](#)

## New CEO for Parking Australia

Parking Australia appointed Hayden Cock as its new Chief Executive Officer, commencing at the end of March. Hayden replaces outgoing CEO, Lorraine Duffy, who was the association's inaugural CEO for 5 years. Sharon Prior, President of Parking Australia, said Hayden's appointment followed an extensive national recruitment process and it was particularly pleasing to have a strong field of candidates. ## Sensors in public places can help create smart & sociable cities

How are smart cities meant to meet citizen needs? Big data from a network of sensors can give managers and planners a real-time, big-picture overview of traffic flows, public transport patronage, and water and power use. However, the needs of people in the city must be met at both the meta and micro levels.

## What does the New Payments Platform mean for parking?

The National Payments Platform (NPP) was launched in February 2018. It was developed through industry collaboration to enable near real-time payments in Australia on a 24/7 basis. The excitement around NPP is due to the fact that it allows consumers to transfer and receive money in almost real-time. [Read more...](#)

## The internet of insecure things

The IoT offers benefits to all industries, but the connectivity of these once isolated things also introduces new vulnerabilities that can affect our homes and industries. As well as promising convenience and efficiency, the IoT is a problem because a vast number of internet connected devices with poor default security create a large attack surface... ## UbiPark launches live on-street parking

UbiPark have announced the release of live on-street parking availability. The City of Melbourne is the first city that UbiPark has introduced the on-street data feed for, but more cities will be added soon. Now live in the App Store and Google Play, the release of live on-street parking data aims to solve traffic and congestion issues. [Read more...](#)

## Smart Parking goes to the historic royal borough of Greenwich UK

Smart Parking are delighted to be a part of the Royal Borough of Greenwich's 'Sharing Cities' and 'Low Emission Neighbourhood' initiatives, after recently receiving confirmation that they have been selected as the preferred parking technology supplier....[Read more...](#)

## Port Phillip announces plans to install parking sensors

The City of Port Phillip in Victoria has announced plans to install parking sensors in key locations, provide a way finding app and implement convenient pay by phone parking across the city as part of new technology upgrades endorsed at a recent council meeting. [Read more...](#)
