

# Electric vehicle fleets incentive

Photo: Carly Earl

This payment scheme helps eligible organisations buy battery electric vehicles (BEVs) and smart chargers via two funding options.

## Option 1: Kick-start funding

**Design:** rolling fund that offers a fixed incentive for eligible BEVs and smart chargers.

**Purpose:** supporting organisations that want to pilot EVs before committing to a larger transition or smaller fleets seeking a simplified application process.

**Funding:** fixed incentive payments per vehicle, as outlined below.

Vehicle category	Incentive per vehicle	Incentive per smart charging port
Passenger Vehicle (PV)/Sports Utility Vehicle (SUV)	\$5,000	\$1,200
Light Commercial Vehicle (LCV)—up to 4.5 tonnes (e.g., utes and small vans)	\$8,000	\$1,200
Light trucks—up to 4.5 tonnes	\$10,000	\$3,000

## Option 2: Competitive bid funding

**Design:** participants submit bids during a competitive round of a reverse auction. Applicant bids are for an incentive to partly cover the total cost of ownership gap between BEVs and equivalent internal combustion engine vehicles.

**Purpose:** supporting organisations with larger fleets to transition to EVs at scale.

**Funding:** funding awarded to successful participants is variable and depends on the competitiveness of all bids received.

## Eligibility

Check which funding option is right for you **on the next page.**

### Incentive decision making tool

Use the tool below to help you determine your eligibility for each of the two funding options.
