

KEY CONSIDERATIONS FOR EV CHARGING

-  Undertake a power audit early – this will impact the location of bays.
-  Consider integration with your other offerings / technology – website, app, payment options (e.g. subscriptions, reserved bays etc)
-  Accommodate different customer groups – fleet, individual consumer etc.
-  Allow double as much time as you would think for finalising site negotiations.
-  Keep stakeholders engaged in every step from start to completion.
-  Ongoing education is crucial; all involved can learn new things to implement in other areas of their businesses.
-  Choose an experienced electrician; don't try to install an EV yourself. A professional electrician will provide a hassle-free outcome, providing dedicated solutions for your individual needs.
